- Java Developer with 5+ years of experience designing, developing, and deploying enterprise-level web applications using Java, Spring Boot, and RESTful APIs.
- Specialized in the full System Development Life Cycle (SDLC), from study and design to coding, testing, integration, and support.
- Expertise in the Spring Ecosystem (Spring Boot, Spring MVC, Spring Data, Spring Security) to build scalable and secure applications, with strong backend development skills in Java.
- Proficient in Core Java 8 features, including Lambda expressions and Stream API, to implement clean, efficient, and maintainable code.
- Strong background in developing RESTful and SOAP-based web services using JAX-RS and JAX-WS, ensuring seamless system integration.
- Utilized Hibernate for ORM, optimizing SQL-based database interactions with Oracle and other relational databases.
- Implemented back-end services focusing on Spring MVC for developing robust web applications.
- Designed and optimized database schemas using SQL Server and performed database operations.
- Experienced in working with NoSQL databases like MongoDB and Cassandra for handling large volumes of data and managing database access operations.
- Worked extensively with XML and JSON data formats for data interchange and configuration.
- Participated in test-driven development (TDD), writing and maintaining unit tests with JUnit to ensure code quality.
- Employed Maven for project build and dependency management, ensuring streamlined development processes.
- Collaborated with cross-functional teams in an Agile environment, contributing to the delivery of high-quality software solutions.
- Integrated continuous development and deployment processes using Jenkins and Docker.
- Managed version control using GIT and SVN, maintaining codebase integrity and facilitating team collaboration.
- Implemented logging using Log4j to monitor application performance and troubleshoot issues.
- Demonstrated strong debugging, problem-solving, and performance optimization skills.
- Effective communicator with strong interpersonal skills, capable of working independently and in a team environment.
- Conducted functional and technical training sessions to enhance team capabilities.
- Foundational knowledge of web technologies is part of consistent upskilling.

EDUCATION

Masters in Computer Science, Bishop's University - Sherbrooke, Quebec

Jan 2023 – Sep 2024

Bachelors in Electronics and Communication Engineering, GMR Institute of Technology, India

Aug 2015 – May 2019

PROFESSIONAL EXPERIENCE

Software Development Engineer | FreshBooks Toronto, ON

Oct 2024 – Till Date

The Adapter is the interface between the provisioning server and Billing & CRM. It picks requests from Billing & CRM and sends them to the provisioning server in a format that the provisioning server can understand. The Adapter waits for a response from the provisioning server for the request sent. After receiving the response, the Adapter sends the response back to Billing & CRM in a format understandable by it.

- Developed a robust Adapter module to act as a communication bridge between the Billing & CRM system and the Provisioning Server, ensuring seamless request/response transformation and exchange between both systems.
- Developed secure and scalable applications using the Spring ecosystem, including Spring MVC, Spring IoC, Spring Transaction Management, and Spring Security.
- Designed and optimized REST APIs using Spring Boot with built-in security mechanisms, and documented endpoints using Swagger for ease of integration and maintenance.
- Utilized Hibernate ORM with SQL to streamline and optimize database interactions, enhancing performance and code maintainability.
- Worked with both relational databases (SQL Server, MySQL) and NoSQL databases (MongoDB, Cassandra) to manage and retrieve large volumes of structured and unstructured data efficiently.
- Gathered functional and technical requirements, participated in project planning, estimation, and documentation, contributing to the full Software Development Life Cycle (SDLC).
- Wrote complex SQL queries, stored procedures, and search filters for efficient data manipulation and retrieval in SQL Server and MYSQL databases.
- Embraced Agile methodology across all development phases—design, coding, testing, and deployment—ensuring timely delivery and continuous feedback integration.

- Followed Test-Driven Development (TDD) principles, driving high code quality through unit, integration, and performance testing using JUnit, JMeter, SOAP UI, and Postman.
- Leveraged advanced Java 1.8+ features such as Lambda expressions, Stream API, and functional interfaces for cleaner, more efficient, and maintainable code.

Senior Software Development Engineer | Amdocs Development Center Pune, India

Nov 2021 – Jan 2023

LESOG (Local Exchange Service Order Generator) receives LSR from CLEC through Frontend Systems to LASR. LASR receives the XML input file does initial validation (VER, PON verification) stores the input file for record keeping and sends the LSR to LESOG. LESOG receives the LSR from LASR does 1st Level & 2nd Level validation, generates the Service Order and sends response back to LASR. LESOG interfaces to different mainframe systems (BOCRIS, BOCABS, ICLOC, TIRKS, RSAG, ATLAS, COFFI, LFACS etc) for data acquisition and entry. LESOG generates service orders from LSRs submitted LASR, updates the Service Order in SOCS and sends the response message (successful/failure) back to LASR.

- Contributed to the migration of LESOG (Local Exchange Service Order Generator) from legacy systems to Java Spring Boot, integrating RESTful web services to improve system performance by concurrently processing 5000+ LSRs (Local Service Requests) monthly.
- Managed integration between LESOG and downstream mainframe systems (BOCRIS, BOCABS, ICLOC) using APIs, leading to faster data retrieval and a reduction in service order generation time.
- Enhanced system performance by refactoring 20,000 lines of legacy code, reducing API response times by 30%.
- Restructured COBOL calls into Spring Cloud Gateway patterns and introduced web services (SOAP and RESTful) to improve system interoperability and communication, significantly enhancing response time efficiency.
- Optimized backend algorithms for LESOG, which significantly improved service order throughput, supporting peak loads during high-demand periods without system degradation, enhancing reliability and reducing operational risks.
- Ensured adherence to coding standards by utilizing SonarQube and SonarLint for continuous code quality analysis, participating in code reviews, and fostering collaboration through constructive feedback to developers
- Developed comprehensive unit and integration tests using JUnit, achieving over 90% code coverage. This significantly reduced production bugs, improved application reliability, and minimized operational risks.

Software Engineer | Magnaquest Technologies Hyderabad, India

Jan 2019 – Nov 2021

RADIUS (Remote Authentication Dial-in User Service) is a networking protocol that provides centralized Authentication, Authorization, and Accounting (AAA) management for users connecting to and using a network service. It integrates with various broadband network elements like NAS systems and Bandwidth Managers. RADIUS is a client-server protocol that runs in the application layer using UDP as the transport protocol.

- Developed and integrated Multi-Level Fair Usage Policy Plan and Add-on plans into the Radius Server (AAA), resulting in a 25% increase in subscription upgrades.
- Implemented MAC authentication functionalities as per client requirements, enabling and disabling as needed.
- Developed and deployed Web Services using both RESTful and SOAP protocols with Apache Axis, integrating log4j for efficient logging and tracking of service-related activities.
- Skilled in monitoring Application Servers and Web Servers, with advanced troubleshooting and debugging expertise, leveraging log messages to quickly identify and resolve issues.
- Built reporting functionality as per client requirements using Apache POI, Jasper Reports with TIBCO, and iReport in various formats such as PDF, HTML, CSV, Word, etc.

SKILLS

- **Programming Languages:** Java, J2EE
- **Frameworks & Technologies:** Spring Boot, Spring Security, Spring Web, Spring Data JPA, Spring Cloud, Spring MVC, SOAP API, RESTful API, Apache Axis
- **Testing Tools:** JUnit, JMeter, Postman, SOAP UI
- **Code Quality Tools:** SonarQube, SonarLint
- **Logging Frameworks:** Log4j
- **Database:** SQL, MySQL, SQL Server, MongoDB, Cassandra
- **API Documentation Tools:** Swagger
- **Reporting Tools:** Apache POI, JasperReports, TIBCO, iReport
- **Version Control & Build Tools:** Git, Maven
- **Software/IDEs:** Eclipse, Spring Tool Suite, SQL Developer, WinCVS, WinSCP, MySQL Workbench
- **Methodologies:** Agile, Waterfall, Test-Driven Development (TDD)
